CONNECTING ROD ASSEMBLIES

'MGA' (Twin-Cam)

Each connecting rod assembly weighs 1 lb. 15 ozs. 6 drams (889.47 grammes), plus or minus 1 oz. (28.35 grammes).

Complete sets of connecting rod assemblies for replacement should all be of similar weight (as is the case in production) but, where an individual assembly is changed, it is essential that it should not differ in weight from the others by more than 3 drams (5.316 grammes).

To facilitate identification, assemblies now being produced will, IF NOT TO STANDARD WEIGHT, be stamped as follows:

+1, +2 etc., to indicate drams ABOVE standard

1, 2 etc., to indicate drams BELOW standard

1 DRAM = 1.772 GRAMMES.
