SECTION P

LUBRICATION

Section No. P.1 Daily service.

Engine.

Section No. P.2 3,000 miles (5000 km.) service.

Engine oil change.
Air cleaners.
Carburettor dampers.
Steering gear.
Propeller shaft.
Gearbox.
Rear axle.
Hand brake cable.

Section No. P.3 6,000 miles (10000 km.) service.

Distributor.
Gearbox oil change.
Rear axle oil change.
Engine oil filter.
Dynamo.

Section No. P.4 12,000 miles (20000 km.) service.

Flushing the engine.
Water pump.
Steering gearbox.

Correct lubrication of any piece of mechanism is of paramount importance, and in no instance is it of greater importance than in the correct choice of lubricant for a motor-car engine. Automobile engines have different characteristics, such as operating temperatures, oiling systems, size of oilways, clearances, and similar technicalities, and the use of the correct oil is therefore essential.

NOTE.—The letters given in brackets throughout the Manual refer to the appropriate section of the recommended lubricants table given on page P.2.

### GEARBOX

| All conditions | Mobil Oil A | Shell X—100 30 | Energol S.A.E. 30 | Filtrate Medium 30 | Steranol W.W. 30 | Duckham's NOL Thirty | Castrol X.L. | Esso Extra Motor Oil 20W/30 |

### B REAR AXLE (HYPOID) AND STEERING GEAR

| All conditions down to —12°C (10°F.) | Mobilube G.X. 90 | Shell Spirax 90 E.P. | Energol S.A.E. 90 E.P. | Filtrate Hypoid Gear 90 | Ambroleum E.P. 90 | Duckham's Hypoid 90 | Castrol Hypoid | Esso Gear Oil G.P. 90 |
| Arctic consistently below —12°C (10°F.) | Mobilube G.X. 80 | Shell Spirax 80 E.P. | Energol S.A.E. 80 E.P. | Filtrate Hypoid Gear 80 | Ambroleum E.P. 80 | Duckham's Hypoid 80 | Castrol Hypoid Light | Esso Gear Oil G.P. 80 |

### C WATER PUMP AND LUBRICATION NIPPLES

| All conditions | Mobilgrease M.P. | Shell Retinax A | Energol L. 2 | Filtrate Super Lithium Grease | Ambroline L.H.T. | Duckham's L.B. 10 Grease | Castrolease L.M. | Esso Multi-purpose Grease H |

### D UTILITY LUBRICANT, S.U. CARBURETTER DAMPERS, OILCAN POINTS, ETC.

| All conditions | Mobil Oil Arctic | Shell X—100 20W | Energol S.A.E. 20W | Filtrate Zero 20/20W | Steranol W.W. 20 | Duckham's NOL Twenty | Castrolite | Esso Extra Motor Oil 20W/30 |

### E UPPER CYLINDER LUBRICANT

| All conditions | Mobil Upperlube | Shell Upper Cylinder Lubricant | Energol U.C.L. | Filtrate Petroyle | Steranol Magikoyl | Duckham's Acidic Liquid | Castrollo | Esso Upper Cylinder Lubricant |
Section P.1

DAILY SERVICE

ENGINE (A)

Inspect the oil level in the engine and refill if necessary to the ‘MAX’ mark on the dipstick. The oil filler cap is on top of the rocker cover and is released by turning it anti-clockwise.

Section P.2

3,000 MILES (5000 Km.) SERVICE

ENGINE OIL CHANGE (A)

Drain the oil from the engine sump after 3,000 miles (5000 km.). The drain plug is on the right-hand side of the sump and should be removed after a journey, while the oil is still warm and will drain easily.

The sump capacity is 7½ pints (9 U.S. pints, 4·26 litres). Refill the engine with new oil.

AIR CLEANERS (A)

Wash the filter element in petrol and allow to dry. Re-oil the elements and allow to drain before reassembling.

It is only necessary to withdraw the two hexagon-headed screws and lift off the outer cover to release each corrugated element. Reassemble the front element with the corrugations clear of the breather spigot in the main filter case.

CARBURETTER DAMPERS (D)

Unscrew the cap at the top of each suction chamber, pour in a small quantity of thin engine oil and replace the caps. Under no circumstances should a heavy-bodied lubricant be used. Failure to lubricate the piston dampers will cause the pistons to flutter and reduce acceleration.

STEERING GEAR (C)

Grease nipples are provided at the top and bottom of each swivel pin and on the steering tie-rods. The gun should be applied to the nipples and three or four strokes given.
REAR AXLE (B)

The combined filler and level plug is reached from below the rear of the car. The oil level should be replenished if necessary to the level of the filler plug hole. (See Fig. P.9)

NOTE.—It is essential that only Hypoid oil be used in the rear axle.

HAND BRAKE CABLE (C)

The grease nipple on the hand brake cable should be given three or four strokes with a grease gun.

Section P.3

6,000 MILES (10,000 Km.) SERVICE

Carry out the instructions detailed in Section P.2 except those under ‘GEARBOX’ and ‘REAR AXLE’ (Section P.2), and continue with the following.

DISTRIBUTOR

Cam bearing (D)

Lift the rotor off the top of the spindle by pulling it squarely and add a few drops of oil to the cam bearing. Do not remove the screw which is exposed.

There is a clearance between the screw and the inner face of the spindle for the oil to pass.

Replace the rotor with its drive lug correctly engaging the spindle slot and push it onto the shaft as far as it will go.

Cam (C)

Lightly smear the cam with a very small amount of grease, or if this is not available, clean engine oil can be used.

Automatic timing control (D)

Carefully add a few drops of oil through the hole in the contact breaker base through which the cam passes. Do not allow the oil to get on or near the contacts. Do not over-oil.

Contact breaker pivot (D)

Add a spot of oil to the moving contact pivot pin.
GEARBOX OIL CHANGE (A)

Drain the gearbox oil.

When the gearbox has been drained completely, 4½ Imperial pints (5½ U.S. pints, 2·56 litres) of oil are required to fill it. The oil should be poured in through the filler plug shown in Fig. P.3.

REAR AXLE OIL CHANGE (B)

Remove the drain plug and drain out the oil. Refill with Hypoid oil to the level of the filler plug hole.

Approximately 2½ pints (2·7 U.S. pints, 1·28 litres) of oil are required to refill the axle.

ENGINE OIL FILTER (A)

Fit a new engine oil filter element. The filter is released by unscrewing the central bolt securing the filter body to the filter head. When fitting the new element, make sure that the seating washer for the filter body is in good condition and that the body is fitted securely to prevent oil leaks.

Ensure that the washers below the element inside the bowl are fitted correctly. The small felt washer must be positioned between the element pressure plate and the metal washer above the pressure spring. It is essential for correct oil filtration that the felt washer should be in good condition and be a snug fit on the centre-securing bolt.
DYNAMO (D)

Add two drops of engine oil to Ref. D, page P.2, in the lubrication hole in the centre of the rear end bearing plate.

Do not over-oil.

Section P.4

12,000 MILES (20000 Km.) SERVICE

Carry out the instructions detailed in Sections P.2 and P.3 in addition to the following.

FLUSHING THE ENGINE

Flush the engine with a flushing oil supplied by one of the recommended manufacturers (page P.2). This operation must be carried out prior to oil filter changing. Use approximately half the normal sump capacity and run the engine for 2½ to 3 minutes at a fast tick-over, after which special care must be taken to ensure complete drainage of the flushing oil.

It is recommended that at 24,000 miles (40000 km.) the sump and oil pump pick-up strainer should be removed for cleaning.

WATER PUMP (C)

Remove the water pump plug on the water pump casing and add a small quantity of grease. The lubri-

cation of the pump must be done very sparingly, otherwise grease will pass the bearings and reach the face of the carbon sealing ring, impairing its efficiency.

STEERING GEARBOX (B)

The two nipples for the steering gearbox and pinion are reached from under the bonnet.

Give the gearbox nipple 15 strokes only, and the pinion nipple five strokes only at the same time, with a gun filled with oil.
